Cryosurgical Wound Care Instructions

1. The treated area may develop a blister during the first 24 hours. You may pierce the blister with a clean needle or simply leave it alone. The initial discomfort will improve during the following day.
2. Clean the area daily with soap and water. Apply Aquaphor (available over the counter) and cover with a Band-Aid. Repeat daily until the site has healed over.
3. Contact the office if there is any evidence of infection or a sudden onset of pain.
4. Most warts require multiple visits depending on size, severity and location.
